Petition to Mayor Malfitano

The chemical dihydrogen monoxide is a major factor in global warming, and if too much of it is inhaled into your lungs, it can kill you. It's important as an industrial solvent and in the production of Styrofoam, so we can't get an outright ban on it. Instead, we want to ban the dumping of it into Rye Lake http://www.wjww.com/html/Rye_Lake_Plant.html to minimize the environmental impact of DHMO.
